

## **Selenia Communications, Italy chooses FavoWeb, a member of A.L.D group, to conduct its Defects Reporting Analysis and Corrective Action System (DRACAS)**

### **FavoWeb was awarded a contract to implement DRACAS in Selenia Communication's telematic security network**

Jan. 15<sup>th</sup>, 2005 – after reviewing the various options in the market for defect reporting and analysis system, Selenia Communication awarded the prestigious contract to FavoWeb, the provider of a web based dynamic DRACAS system.

In early 2004, Selenia Communications, a independently owned subsidiary of Finmeccanica, one of Europe's largest defense organizations and a leader in the global defense market, embarked on a search for a superior defect analysis and corrective action system for their secure communication division. Their search concluded that FavoWeb's software, a 3<sup>rd</sup> generation in FRACAS / DRACAS application, is the most advanced system in the market.

By implementing FavoWeb software solution, Selenia Communications is able to support its entire failure reporting process and failure/defect analysis. DRACAS is an essential tool in assuring the highest availability and reliability of Selenia Communications products. In the first stage, FavoWeb was installed in a number of the company sites in Italy. In the second stage, FavoWeb software will cover all of the company sites worldwide. FavoWeb Ltd. will also provide Selenia Communications with process characterization, personnel training and system implementation services.

Selenia Communications, through its affiliation with Finmecannica, supplies advanced communications solutions, key technologies and services to the world's leading defense forces.

Selenia Communications, Secure Systems Division is a world leader in the development and supply of information security products and services to military, government and commercial organizations.

The company provides telemetric network security and connection encryption products, system integration activities, consultancy for national and international defense organizations, large size firms and to public and private organizations.

FavoWeb Ltd. was founded in 2001 as a spin-off from A.L.D. (Advance Logistics Development). FavoWeb expertise lies in the field of Failure Reporting and Analysis (DRACAS, FRACAS, CAPA) through its dynamic web-based software.

FavoWeb has been awarded large contracts with organization such as Lockheed Martin JSF project, Israel Defense Forces and Israel's Aircraft Industry, among many other satisfied customers.

The software is highly effective, user friendly and easy to modify to any industry that is failure sensitive.
